JOURNAL OF CRYSTAL GROWTH

Subject index

Cellular growth
– of dendrites of copper aluminum alloys 35
Characterization
– by triple axis X-ray
– – of cadmium zinc telluride 775
– by visualization
– – of convection 19
Computer simulation
– of convection 120
– of Czochralski melt flow 1
– of Czochralski systems 7
– of growth from solution 369
– of heat exchange method 13
– of interface shape 362
– of misfit stress 506
– of moving boundary problem 35
– of oxygen precipitation in silicon 163
– of phase field of dendritic growth 54
– of segregation 35
– of segregation by Ising model 28
– of strain energy 675
– of thin film growth 531
Constitutional supercooling
– of gallium indium arsenide 250
– of indium antimonide 238
Convection 19, 120, 226, 362
Crystal growth models
– for aluminum silicon copper alloys 65
– for morphology prediction 380
– for structural aspects of anhydrous borates 301
– for three-dimensional growth 54

Dendritic growth
– of copper aluminum alloys 35
– of pure materials 41
Device characterization
– diodes 213, 751
– electronic materials 202, 763
– heterojunction 768
– lasers 272, 593
– low-dimensional quantum structures 605
– nonlinear optics 272
– solar cells 170, 283, 579
Defects
– indium gallium arsenide 550
– indium phosphide 230
– protein crystals 354
Diffusional control
– of growth 362, 369
– of vacancies in mercury cadmium telluride 746
Diodes, see Device characterization
Dissolution
– of gallium antimonide 226
Dopants
– barium in C_{60} 828
– chlorocarbon in indium phosphide 611

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 96
Eutectic growth
– of tin selenide alloys 70

Heterojunction, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of growth 28, 35, 82, 313, 369, 386, 522, 564, 675, 768, 851
– of interface control 362, 386, 522
– of nucleation 369, 386
– of surface reaction 708

Lasers, see Device characterization
Lasers, crystals for
– blue light 763
– infrared conversion 272, 278
– lithium calcium fluoride 337
– lithium strontium aluminum fluoride 337
– second harmonic generation 393

Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium manganese telluride 263
– – of 4-aminobenzophenone 393
– – of gallium antimonide 96
– – of germanium 194

– – of indium antimonide 238, 245
– – of lead tin telluride 139
– – of selenium doped gallium arsenide 108, 220
– – of tin selenium alloys 70
– by Czochralski method
– – of barium beta-borate 308
– – of gallium arsenide 208
– – of gallium indium arsenide 250
– – of indium phosphide 230
– – of lanthanum strontium calcium oxide 324
– – of lithium calcium fluoride 337
– – of lithium niobate 293
– – of lithium strontium aluminum fluoride 337
– – of lutetium gadolinium oxyorthosilicate 331
– – of selenium doped gallium arsenide 112
– – of silicon 182
– – of silicon germanium 182
– – of strontium praseodymium gallium oxide 320
– – of yttrium vanadate 293
– – theory of
– – – finite element formation 1
– – – heat transfer 7
– by edge defined film-fed growth
– – of silicon 170
– by floating zone method
– – of semiconductors 159
– by heat exchange method
– – of barium gadolinium oxide 13
– by high pressure Bridgman
– – of cadmium zinc telluride 256
– by horizontal gradient freeze
– – of cadmium germanium arsenide 272
– – of mercury gallium sulphide 278
– by uniaxial solidification
– – of aluminum silicon copper alloys 65
– – of lead tin telluride 90
– – of mercury cadmium telluride 101
– by zone melting
– – of silicon germanium 187
Microgravity, growth under
– of ammonium dihydrogen phosphate 369
– of dendrites 82
– of gallium antimonide 96
– of lead tin telluride 90, 139
– of mercury cadmium telluride 101
– of mercury chloride 120
– of organic nonlinear optics 130
– of potassium dihydrogen phosphate 369
– of selenium doped gallium arsenide 108, 112, 220
– of semiconductors 159
Morphological stability
– of congruent crystals 293
– of surfaces 531

Nucleation
– of silicon dioxide in silicon 163
– of YBCO 409

Numbers
– Grashof 19, 120
– Peclet 130
– Prandtl 19
– Rayleigh 120, 130

Organic crystals
– 4-aminobenzophenone 393
– paraffin 380

Phase diagram
– of binary and ternary systems 369
Precursor
– for aluminum arsenide antimonide 593
– for cadmium telluride 708
– for hydroxyapatite 386
Proteins 354, 386, 480
Purification of materials
– of cadmium germanium arsenic 272

Silicon 163, 170, 176, 680
– carbide 653, 658, 662, 669
– germanium 182, 187, 675
Solar cells, see Device characterization
Solid growth technique
– by recrystallization
– – of gallium arsenide 635
– – of zinc selenide 751
– by wafer bonding
– – of aluminum gallium arsenide 635
Solution growth technique
– by flux method
– – of lanthanum gallate 806, 813
– – of lithium niobate 293
– – of praseodymium gallate 806, 813
– – of yttrium vanadate 293, 328
– by hydrothermal growth
– – of nickel oxide type crystals 346
– by low-temperature method
– – of 4-aminobenzophenone 393
– – of silicon from copper aluminum solutions 176
– by top seeded solution growth
– – of yttrium vanadate 328
Statistical mechanics, molecular theory
– of nucleation 369
Stefan problem or moving boundary problem
– of electrolyte solutions 369
Superconductivity materials, high T_c
– bulk
– – of TBCCO 342
– film
– – of rear earth barium cuprates 806, 813
– – of YBCO 398, 409, 417
Surface energy, determination
– of calcium phosphates 386
– of YBCO 409

Surface morphology
– of gallium arsenide under arsenic pressure 539
– of indium gallium phosphide by optical related anisotropy 558
Surface structure
– of gallium doped germanium 202
– of lanthanum calcium manganate 455
– of metalorganic chemical vapor deposition grown layers 454
– of rutile 424
– of YBCO 409

Thin film growth, epitaxy
– by chemical vapor deposition
– – of copper 837
– – of germanium 686
– – of silicon 680
– – of silicon carbide 653, 658
– by hot wall epitaxy
– – of antimony 845
– – of barium doped C_{60} 828
– – of bismuth 845
– by liquid phase epitaxy
– – of gallium antimonide 226
– – of gallium arsenide on silicon 630
– – of indium phosphide 622
– – of organic crystals 487
– – of silicon 176, 680
– by modulated molecular beam epitaxy
– – of aluminum gallium arsenide 616
– – of cadmium zinc telluride 768
– – of gallium aluminum arsenide 522
– – of gallium arsenide 522, 539, 572
– – of iron oxide 440, 446
– – of zinc selenide 751
– by vapor phase epitaxy
– – through metalorganic chemical vapor deposition
– – – of aluminum arsenide antimonide 593
– – – of aluminum gallium arsenide 564, 579
– – – of cadmium telluride 708
– – – of cadmium zinc telluride 713
– – – of gallium arsenide 513
– – – of gallium indium phosphide 558, 585
– – – of gallium nitride 647
– – – of gallium phosphide 558
– – – of indium aluminum arsenide 599
– – – of indium gallium aluminum arsenide 599
– – – of indium nitride 641
– – – of indium phosphide 558, 605, 611
– – – of lead titanate 464, 473
– – – of lead zirconate titanate 464
– – – of rutile 424
– – – of silicon 579
– – – of III–V compounds 544
– – – of zinc selenide 757, 763
– – – of zinc sulphide selenide 726
– – through sputtering
– – – of barium titanate 790
– – – of beta-barium borate 434
– – – of rutile 424
– – – of tantalum nitride 495
– – – of zinc oxide 691

Vapor growth technique
– by chemical transport
– – of organometalics 801
– – of zinc selenide 751
– by evaporation and condensation
– – of cadmium telluride 740
– – of cadmium zinc telluride 733
– – of C_{60} 130
– – of copper indium gallium selenide 283
– – of mercury chloride under microgravity 120
– – of silicon carbide 669
– – of zinc telluride 719
– by physical vapor transport
– – of cadmium zinc telluride 733
– by pulsed laser deposition
– – of beta-barium borate 434
– – of strontium rubidium oxide 417
– – of YBCO 417
– – of yttrium manganate 796
– by semi-closed system
– – of cadmium telluride 696
– by sublimation
– – of silicon carbide 662
